Planning Information

Follow all minimum clearances to combustibles surfaces shown in the illustrations on the following pages.

For 48" (1219) models only, two separate electrical supplies are required. For ease of installation, the receptacles should be positioned with the grounds facing each other to prevent cord interference.

Electrical Requirements

Installation must comply with all applicable electrical codes.

Locate the electrical supply flush with the wall or floor. A separate circuit servicing only this appliance is required.

If a power supply cord is used, the cord must be designated for use with ranges and rated for 240 V, 50 amps, and must include 3 or 4 conductors. A 4-conductor cord is required for installations where grounding through the neutral is prohibited.

⚠ CAUTION

Risk of electric shock. If the cord or plug becomes damaged, disconnect the appliance from the power supply and replace only with a cord or plug of the same type.

Performance may be compromised if the electrical supply is less than 240 volts.

IMPORTANT NOTE: Two separate electrical services are required for 48" (1219) models.
